

Alberta Forest Produces Association Leadership in Health and Safety Training on CD-Rom!

The AFPA Leadership in Health & Safety (LH&S) training on CD-Rom gives AFPA members and their contractors access to quality health and safety training on demand and on-site! The interactive CD provides learners with:

- a breakdown and explanation of the 13 elements of an effective Health and Safety program
- the tools for developing and implementing a health and safety program
- skills for workers at all levels of an organization.

The CD uses the course content from the traditional 3-day classroom sessions and gives learners the option of:

- taking the training right at the work site
- working at their own pace and when time allows
- testing for an AFPA LH&S certificate (the first step towards Peer Auditor certification)
- reviewing training materials as needed

AFPA members and their contractors now have the means to provide everyone on their work site with this important training opportunity!
